<Annotation>From Sandeep Byrappa

Subject Line: Install a Linux machine in Staging with all the package selected

Hi Amit,

Install a linux machine with Redhat 5.8 in Staging environment with IP Address

10.106.5.55 | 255.255.255.128 | 10.106.5.1

Hostname : SCC-SIP

Password : cisco123

CPU " 4

MEMORY " 4 GB

REDHAT 5.8 ISO is located in scc-data &gt; cd-dvd-iso &gt;redhat  
</Annotation>

Subject Line: Install a Linux machine in Staging with all the package selected

Hi Amit,

Install a linux machine with Redhat 5.8 in Staging environment with IP Address  
10.106.5.55 | 255.255.255.128 | 10.106.5.1  
Hostname : SCC-SIP  
Password : cisco123  
CPU â€" 4  
MEMORY â€" 4 GB

REDHAT 5.8 ISO is located in scc-data &gt; cd-dvd-iso &gt; redhat  
</Annotation>

    <Annotation>vShield Manager is the
centralized network management component of vShield, and is
installed as a virtual appliance on any ESX host in your
vCenter Server environment. A vShield Manager can run on a
different ESX host from your vShield agents. Using the vShield
Manager user interface or vSphere Client plug-in, administrators

```

install, configure, and maintain vShield components. The vShield Manager user interface leverages the VMware Infrastructure SDK to display a copy of the vSphere Client inventory panel, and includes the Hosts & Clusters and Networks views.

```
