Advanced Open File

☑ Use Advanced Open File Option

Open file configuration

◉ Automatically select open file technology

◯ Symantec Volume Snapshot Provider

Use the Advanced Option File Option (AOFO) wizard to configure the Symantec Volume Snapshot Provider for use with AOFO.

AOFO Wizard

◯ Veritas Storage Foundation for Windows FlashSnap Option

◯ Microsoft Volume Shadow Copy Service

Snapshot provider:  Automatic - Allow VSS to select the snapshot provider

☑ Process logical volumes for backup one at a time

Note: The Advanced Open File Option settings apply to all backup selections in the job, including file system and databa selections.

Information Store Backups

Backup method:

| Full - Database & Logs (flush committed logs) | ▼ |

☐ Continuously back up transaction logs with Backup Exec Continuous Protection Server

☐ Make a recovery point that creates browsable backup sets and truncates logs every [ 1 ] [Days ▼]

Without recovery points, individual mail messages and folders can only be recovered from the last full backup.

☐ Enable the restore of individual mail messages and folders from Information Store backups

(Exchange 2000 and later only; incremental backups supported with policy-based jobs only)  [ Guide Me... ]

☑ Perform consistency check before backup when using Microsoft Volume Shadow Copy Service (VSS) snapshot provider

☑ Continue with backup if consistency check fails

If Exchange 2007 backup source is LCR or CCR:

| Back up from the passive copy and if not available, try the active copy (recommended) | ▼ |
