Slack App for NetBackup Self Service

Overview
This application connects to your existing NetBackup Self Service installation and requires version 8.1.2 or above.
To use this Slack application, you must first link it to your existing NetBackup Self Service installation.
The REST API must be accessible from Slack and the version of NetBackup Self Service must be 8.1.2 or higher.

How to Install this App
Prior to installation log into your NSS instance and do the following;
- Visit the 'About NetBackup Self Service' page to copy the REST API URL
- Visit the 'About Me' page to create and copy an access key/secret.

On installation of the application to your workspace you will be prompted to enter these values.

Once you have this information you can proceed to the link below to add the application to your Slack workspace;
